

Figure 1 is a plot showing the correlation energy E_{corr} (in Hartrees) versus the number of basis functions N (in thousands). The plot compares the results of the SAPT(PBE0)-D4 method (S, ND) and the SAPT2+3(CCD)/aTZ method. The x-axis ranges from 2.0 to 5.0, and the y-axis ranges from -10 to -7. A vertical dashed line is drawn at $N = 2.5$. The inset plot shows a zoomed-in view of the region where N is between 2.25 and 2.45 and E_{corr} is between -8 and -9.

Legend:

- SAPT(PBE0)-D4 (S, ND) (Purple line with upward-pointing triangles)
- SAPT(PBE0)-D4 (I, ND) (Orange line with downward-pointing triangles)
- SAPT(PBE0)-D4 (S) (Red line with squares)
- SAPT(PBE0)-D4 (I) (Green line with diamonds)
- SAPT2+3(CCD)/aTZ (Black line with circles)
